### About This Game

In Safe House, step into a top-secret spy headquarters situated in the fictional African nation of Kazataire. As the Safe House manager, you must build and upgrade the rooms – which will grant you new abilities and operations. You'll also be tasked with generating revenue each day by completing various espionage activities ranging from breaking codes to forging IDs.

But secret agents don't work alone. As a behind-the-scenes director of a shadowy political conflict, you will recruit, train, and deploy spies and soldiers, shaping the events of the game's non-linear story. Will you complete your mission – regardless of the cost? Can your allegiances be bought and sold? In the shadows, it's difficult to tell friend from foe.

## STRIKING BACK

After the initial explosion, a number of people ran out of the burning apartment. One of your spies followed the fleeing men into the night. He's radioed in to you, claiming that the men may be bombers. However he can't fully confirm. He has a visual and can take out the men if ordered. What do you do?

Dead game. Its been 8 months and still no update to fix a bug which I cannot progress any further. Developer site is down and it looks like they left us in the dark. I feel bad for people who just got it. I got it a month after release. Please take this off the market.
